

Empirical evidence framework

MAIN COMPUTATIONAL EVALUATION

RQ1

Predictive comparison

Validation selection and
held-out evaluation

RQ2

Stage-wise failure localization

Candidate detection, criterion verification,
and primary selection

RQ3

Retrieval comparison

No retrieval, global Top-5,
and parent-balanced retrieval

RQ4

Primary-selection strategies

Finalization policies and
additional selection methods

RQ5

Robustness and external transfer

Model scale, MDD-5k, diagnostic scope,
and cross-corpus selectors

Case-sampling strata

ONGOING COMPLEMENTARY STUDY

Psychiatrist case review

Clinical interpretation of selected benchmark disagreement cases
Partial results excluded until completion
