

Detection

Gold among candidates?
Often — gold usually present

Verification

Which criteria hold?
Many pass (6 of 14)

Selection

Commit one diagnosis
Gold first only ~52%

Verification confirms a median of 6 of 14 disorders — gold is retained but not isolated

■ gold ■ other confirmed □ not confirmed

Candidate coverage exceeds committed Top-1: detection often succeeds and verification is criterion-grounded and high-coverage but non-selective — selection is where accuracy is lost.
