

Empirical evidence sequence

1. Retrieval-configuration selection (RQ3)

Public validation: no retrieval / global Top-5 / parent-balanced
Select and freeze the Single and HiED-DA configurations

2. Same-split benchmark positioning (RQ1)

Internal held-out: Majority / TF-IDF + LR / Single / HiED-DA

3. Stage-wise disagreement localization (RQ2)

Candidate detection

Criterion-compatible
retention

Committed-primary
agreement

4. Primary-selection interventions (RQ4)

DA vs. NtS
Fusion, pairwise, debate,
and repeated-generation methods

5. Sensitivity and transfer analyses (RQ5)

Model scale and MDD-5k
Diagnostic scope, cross-corpus transfer, and error patterns

ONGOING COMPLEMENTARY CLINICAL STUDIES

LingxiDiag Pilot Review

20 selected disagreement cases
from the internal held-out set
Blinded review by two psychiatrists
ONGOING

CGMH Real-World Validation

Real-world psychiatric consultations
Agreement with recorded diagnoses and
a blinded psychiatrist
transcript-only reference
