

1. Retrieval-configuration selection (RQ3)

Public validation: no retrieval / global Top-5 / parent-balanced
Select and freeze the Single and HiED-DA configurations

2. Same-split benchmark positioning (RQ1)

Internal held-out: Majority / TF-IDF + LR / Single / HiED-DA

3. Recorded-output disagreement localization (RQ2)

Top-3 candidate
detection

Gold-label
inclusion

Committed-primary
agreement

4. Primary-selection interventions (RQ4)

DA vs. NtS
Fusion, pairwise comparison, debate,
and self-consistency variants

5. Sensitivity and transfer analyses (RQ5)

Model scale and MDD-5k
Diagnostic scope, cross-corpus transfer, and disagreement patterns

ONGOING COMPLEMENTARY CLINICAL STUDIES

LingxiDiag Pilot Review

20 selected disagreement cases
from the internal held-out set
Blinded review by two psychiatrists
ONGOING

CGMH Real-World Validation

Real-world psychiatric consultations
Agreement with recorded diagnoses and
a blinded psychiatrist
transcript-only reference
